

Global Organic Textile Standard (GOTS)

A certification for organic textiles, ensuring that they are made responsibly with responsibly grown materials and fair labor practices.

GOTS aims to ensure organic integrity, responsible production, fair labor conditions, reduced environmental impact, and consumer trust in the textile industry.

Organic Material

GOTS requires products to contain at least 70% certified organic fibres and must meet strict organic and social standards.

Chain of Custody

A chain of custody is established to track the organic fibers from source to final product. This includes the branding of the product.

Compliance with Certification

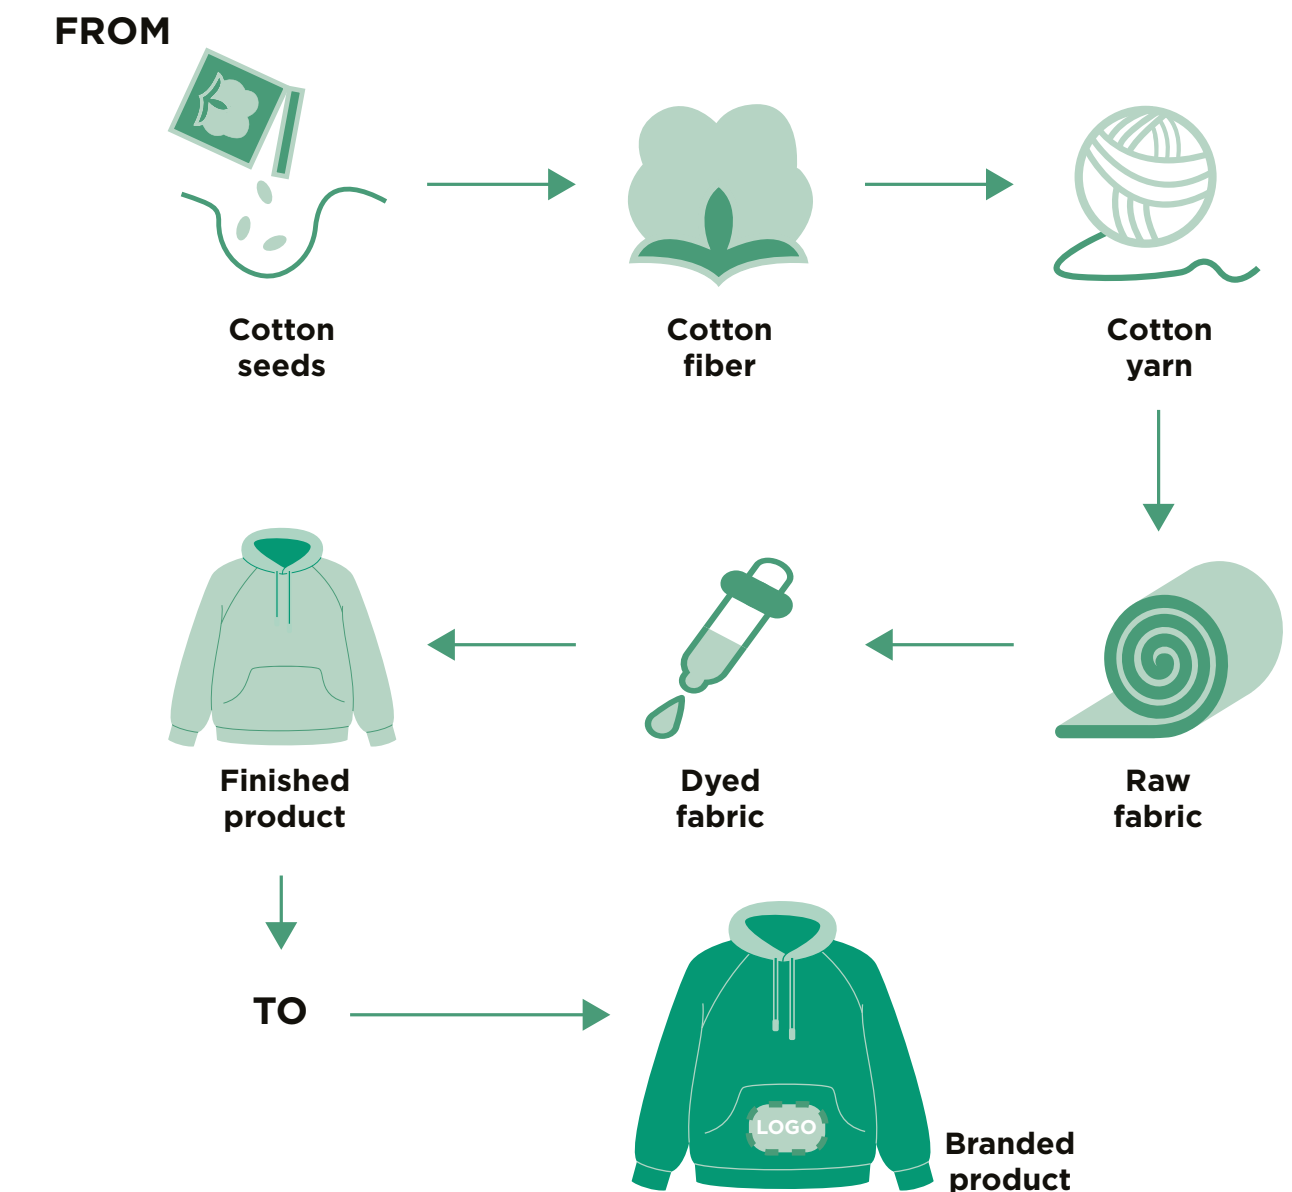

Yearly inspections verify adherence to GOTS requirements at each stage of production, including branding, and warehousing.

Labeling Giving Assurance

Approved products bear the GOTS label, assuring customers of their organic and ethical qualities.

Consumer Confidence

By choosing GOTS-certified products, end-users can make conscious choices for a cleaner planet and better working conditions in the textile industry.
